CAREER OBJECTIVE

A Computer Engineering student pursuing a Bachelor of Science degree with foundational knowledge in Cybersecurity and growing experience in Artificial Intelligence and Web-based/Hardware Development. Hands-on application of programming concepts using C#, JavaScript, HTML, CSS, and Node.js while leveraging AI tools to support research, debugging, and development workflows. Seeking an entry-level opportunity to apply my technical skills, gain professional experience, and further strengthen my capabilities in Cybersecurity and Artificial Intelligence.

CERTIFICATIONS AND SEMINAR/WEBINAR EXPERIENCE

Cisco Security Operations and Defense Analyst – (July 2026)

- Completed a full course training in cybersecurity operations, covering Security Operations Center fundamentals, defense analyst responsibilities, common security technologies, and SOC performance metrics.

Cisco Network Defense – (July 2026)

- Completed a full course self-paced training in network defense concepts, including threat detection, vulnerability assessment, access control, security monitoring, and defensive strategies for protecting network infrastructure.

Cisco Network Support and Security – (June 2026)

- Completed a full course self-paced training in networking fundamentals, protocols, threat mitigation, help desk operations, ticketing systems, and IT support best practices.

Cisco Introduction to Cybersecurity – (June 2026)

- Completed a full course self-paced training of cybersecurity fundamentals, including cyber threats, vulnerabilities, threat detection and defense, network security concepts, and data privacy.

ISC2 Certified in Cybersecurity (CC) – (April 2026 – May 2026)

- Completed a full course self-paced training of Cyber Security Fundamentals including security principles, network security, and risk management.

Stellar UniTour Bootcamp (Blockchain Training) – (March 2026)

- Completed a webinar training in blockchain fundamentals, decentralized systems and crypto-based transactions with AI-assisted learning support.

Hack The Box (Cybersecurity Fundamentals) – (March 2026)

- Completed the seminar that covered fundamentals in essential security concepts, tools, and attacker mindset in cybersecurity.

EDUCATIONAL BACKGROUND

Bachelor of Science in Computer Engineering – University of the East (Caloocan)

2024 – Present (3rd Year)

Achievement: Dean's Lister

Senior High School – St. Gabriel Academy

2022 – 2024

Achievement: Consistent Honor Student | Awarded Best in Research

TECHNICAL SKILLS

- Cybersecurity: Security Principles, Network Security, and Incident Response
 - AI Automation
 - IT Helpdesk
 - Fundamentals of C#, HTML, CCS, JavaScript
 - Hardware: Arduino and Circuit Design
 - Problem-solving
 - Willingness to learn
 - Strong interest in learning new technologies
-

PROJECTS

Otokwikk – Carwash Management System with AI Chatbot Integration

- Designed a web-based carwash management system workflow for customer bookings, vehicle service management, scheduling, and administrative operations.
- Developed and implemented a full-stack application using JavaScript, HTML, CSS, Node.js, and MongoDB with structured backend services and database integration.
- Integrated an AI chatbot feature to provide automated customer assistance, respond to service-related inquiries, and improve user interaction.

CivicLens – Object-Oriented Programming Project (AI-Powered Societal Fact-Checking System)

- Designed a workflow where user queries or links are processed and analyzed using an integrated AI model for fact-checking.
- Developed an AI-powered automation system that evaluates and verifies claims related to societal issues.
- Implemented using C# in Visual Studio with a structured system for handling input, AI processing, and response display.
